## Riding the Learning Cycle

John Labbe is a professional trainer, speaker and consultant who inspires audiences to use their natural learning cycle for professional growth and increased success.

John's seminars and workshops are filled with insights gained from more than 20 years of business training experience. Having learned over four dozen jobs in his career as a writer of custom training programs, John gives his audiences practical and hard-earned strategies to strengthen their on-the-job learning.

Known for his high energy and humor, as well as the collaborative spirit of his programs, John makes each session memorable, useful, and inspiring. Meeting planners find John flexible, easy to work with, and engaging.

### Programs

All programs are completely customizable for length and audience

#### Keep Pedaling! Ride the Learning Cycle to Success

Change happens fast. We have to learn new software, procedures and websites while adapting to new colleagues, managers and responsibilities. Work is a steady stream of demanding learning experiences. In this fast-paced and interactive session, learn to meet these challenges and achieve more success by getting the most out of your learning skills.

#### Debrief it: Make Your Experience Count

Everyday work experiences can be a source of valuable learning if we take the time to debrief our experiences. Professional athletes debrief every performance — and you should too! Add to your success and job satisfaction by learning strategies to turn the ordinary, frustrating and irritating parts of your job into opportunities for growth and learning.

#### Lead With Your Brain

Because 80% of all learning on the job happens informally, knowledge leaders are essential elements of organizational growth and development. In this interactive session, learn to use your talent and knowledge for leadership. You'll increase your understanding of how people learn and what it takes to influence others for positive results. Learn to become a knowledge leader.

#### Together We Can Do Anything

Several heads can be better than one — yet committees often get little done. Using the techniques of Action Learning, groups can solve difficult business problems while the members develop their professional skills of analysis, problem solving, communication, planning and more. In this session, learn how to turn groups into sources of growth, change and success.

**Help your group, business or employees ride the learning cycle to success by booking John Labbe today.**
